DETAILED ACTION

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 2/10/09 has been entered.

Applicants' arguments, filed 02/10/09, have been fully considered. Rejections and/or objections not reiterated from previous office actions are hereby withdrawn. The following rejections and/or objections are either reiterated or newly applied. They constitute the complete set presently being applied to the instant application.

Election/Restrictions

Newly submitted **claims 30 and 31** directed to an invention that is independent or distinct from the invention originally claimed for the following reasons: anthrocycline cytotoxic agents (e.g. the compounds of new claim 31) are distinct in structure than previously claimed compounds topotecan and irinotecan, and thus not related species.

Since applicant has received an action on the merits for the originally presented invention, this invention has been constructively elected by original presentation for prosecution on the merits. Accordingly, claims 30 and 31 withdrawn from consideration as being directed to a non-elected species. See 37 CFR 1.142(b) and MPEP § 821.03.

Claim Rejections - 35 USC § 112 - Scope of Enablement

Claims 25-27 and 29 stand rejected under 35 U.S.C. 112, first paragraph, because the specification, while being enabling for reducing the BCRP-mediated resistance in Saos2BVCRP#4 cells comprising administering between 1 .micro.M to 5 .micro.M imatinib and topotecan (see pg 7 Table 1) in vitro, does not reasonably provide enablement for the prevention or reversal of the same, or the broader class of anticancer agents.

Applicants assert Examiner did not provide objective evidence that casts doubt upon the present disclosure, and therefore the rejection is improper.

Enablement is determined by application of the In re Wands factors to the instant claims. As discussed in the Office Action mailed 8/20/08, incorporated herein by reference, the factor of unpredictability for cancer treatments when comparing in vitro to in vivo results weighs heavily against whether one of skill would accept the assertion that the instant claims are enabled. While the skill in the art was found to be high, the disclosure of a single cell line responsive to a single combination, (imatinib and topotecan) in vitro does not provide sufficient evidence to support the ability to reverse anti-cancer agents, generally, as claimed in the instant claims, given the large amount of unpredictable experimentation required for each combination of agents and each cancer line.

Conclusion

No claims allowed.
